# Automate Studio Manager

## Centralized Governance for SAP® Automation

### Ensure enterprise-grade oversight as business teams accelerate SAP process automation

**Automate Studio Manager** is an enterprise-grade administration and governance platform designed to maximize the value, security, and efficiency of Automate Studio within organizations that rely on SAP for critical business processes. It addresses the growing need for centralized control and governance over automation scripts, user permissions, license allocation, and auditability in complex SAP environments.

As companies scale their use of automation for SAP business processes and data tasks, the business risks associated with unmanaged scripts, license sprawl, and compliance gaps increase. Automate Studio Manager mitigates these risks by providing IT teams and business process owners with granular oversight, reduced manual overhead, and ensuring governance at scale.

### Automate Studio Manager is perfect for:

#### IT Administrators

Centralize developer and user license management, enforce policies, and monitor usage across the organization.

#### Business Process Owners

Schedule, execute, and audit automated jobs without relying on individual desktops or forcing users to wait for SAP jobs to run.

#### Compliance & Audit Teams

Access detailed logs and reports for regulatory and internal audits.

#### End Users

Benefit from shared, governed automation content, job scheduling, and reliable server-based execution.

### Key Features & Capabilities

Feature Area	Description
<b>Centralized License &amp; User Management</b>	Assign, track, and reclaim licenses; define roles and permissions with precision.
<b>Server-Based Job Execution</b>	Schedule and run SAP automation jobs directly from the server, reducing local desktop PC dependency.
<b>Content Sharing &amp; Governance</b>	Securely share automation scripts and templates across teams; maintain version control and approval workflows.
<b>Audit &amp; Compliance</b>	Track who did what and when; quickly access data files exchanged with SAP for audits.
<b>Usage &amp; KPI Reporting</b>	Generate custom reports on time/cost savings, transaction volumes, process status, active users, and data errors.
<b>Policy Enforcement</b>	Set limits on records/transactions per job; monitor job progress in real time.
<b>Multi-user interface environments</b>	Seamlessly works with Automate Studio scripts for SAP GUI, Fiori, and SAP GUI for HTML transactions.

- Define preferences for default workflows, approval settings, versioning, and script development
- Grant access to data uploads, extracts, and BAPI functionality

- Installation and upgrade of Studio and Evolve (including Automate Function Module)
- Administration duties – creating users, license management
- Requesting and onboarding new users (Ex: Developer, Runner, Standard user, Administrators, Visitors)
- Script creation and change process
- Workflow solution creation and change process
- Training and Support
- Reporting and Audits – Tracking ROI and usage. Audit active/inactive users.

- **Integration:** Fully compatible with Automate Studio for SAP GUI, Fiori, and HTML-based SAP interfaces.
- **Deployment:** Server-based architecture enables enterprise-wide scalability and reliability.
- **Administration:** Includes Active Directory Sync for automated user/role management in large environments.
- **Customization:** Supports custom reports, policy settings, and email notification templates.
- **Support:** Backed by Precisely's global support and continuous product updates.

- **Reduction** in manual SAP data entry hours
- **Increase** in automation script reuse and sharing
- **Improved** audit readiness and compliance scores
- **Lower total cost** of ownership for SAP automation
- **Higher user satisfaction** with process reliability and performance

- **Increased Productivity:** Eliminate manual license and script management; automate repetitive SAP data tasks at scale.
- **Enhanced Security & Compliance:** Granular access controls, detailed audit trails, and policy enforcement reduce risk and simplify compliance.
- **Cost Optimization:** Server-based execution and efficient license allocation lower infrastructure and operational costs.
- **Improved Collaboration:** Shared content and centralized governance foster cross-team alignment of best practices and their adoption.
- **Scalability:** Supports organizations of all sizes, from departmental deployments to global SAP landscapes.

**Hosted Automate Studio Manager** is the cornerstone for organizations seeking to manage and govern their SAP automation initiatives. By centralizing control, enhancing security, and enabling server-based execution, it transforms ad-hoc automation into a scalable, compliant, and cost-effective activity, driving measurable business value across the SAP landscape.
