

Automate Studio – Empower Business Users with industry-leading spreadsheet-based SAP Automation

No matter whether you are using SAP ECC or have transitioned to SAP S/4HANA, Precisely's Automate Studio empowers your business teams to use Excel or Google Sheets to create and manage SAP data. With simple, business-friendly templates, users can perform mass data changes, post transactions, or validate records in minutes without having to learn or navigate complex SAP user interfaces.

Designed for scale, Studio delivers rapid productivity gains across departments like finance, supply chain, and master data. By automating business processes, Studio helps you become more efficient in SAP data creation and management while improving data integrity and accuracy.

Example Automate Studio Use Cases:

- Mass updates to SAP master data, including materials, vendors, customers, and G/L accounts
- Streamline journal entry uploads
- Transactional data processing (e.g., PO creation, goods receipts)
- SAP data transformation and cleansing for migrations and day-to-day business needs

Key Features:

- Eliminates complex SAP user interfaces for business users
- Replaces SAP interfaces (SAP GUI, Fiori, and SAP GUI for HTML) with business-friendly spreadsheet interfaces
- Works with BAPIs, IDocs, transactions, and custom T-codes
- Built-in data validation and error correction before uploading data to SAP
- Zero scripting, coding, or ABAP required

Easy-to-use spreadsheet-based interface

Automate Studio is an integrated tool for quickly deploying templates via Excel or Google Sheets to upload data to your SAP S/4HANA ERP system, bypassing the complexities of SAP user interfaces such as Fiori or the SAP web GUI. You can streamline almost all SAP processes, from master data object creation to batch data management, including large-record changes and uploads, and complex master data creation tasks.

With the no-code Automate Studio development, you can create automation scripts without programming using our simple record-map-run process.

One Developer: Multiple SAP Environment Types

Automate Studio delivers a flexible solution environment that enables developers to work with nearly any SAP ERP system using a common platform. This flexibility is delivered via the traditional Automate Studio modules for the SAP GUI and ECC via t-codes and BAPIs, and the new additions for web-based interfaces: Fiori automation and SAP GUI for HTML available with SAP S/4HANA Cloud and on-premises. The new Automate Studio Pro developer license supports all of the SAP environments.

Who It's For

Automate Studio enables you to digitize complex SAP processes faster and build high-performance solutions with a range of rich SAP capabilities out of the box, so you can get to value fast.

- Eliminate manual data entry
- Upload SAP data in record time
- Improve data quality and integrity
- Minimize reliance on IT for Excel integration with SAP
- Get up and running fast with integrated SAP to Excel or Google Sheets integration
- Simplified, no-code user experience via record-map-run development
- Ensure compliance and security standards

Automate Studio for Fiori Automation Modules Fiori Automation

Streamline SAP Fiori data creation processes.

- Create automation scripts in three easy steps
- Eliminate manual data entry through Fiori apps
- Govern the creation of SAP data
- Validate data before posting to SAP

Simplified Business User Experience

Run SAP processes easily and securely from Excel or Google Sheets.

- SAP data creation and change without interacting with SAP GUI
- Execute previously created upload templates from within Excel or Google Sheets
- Validate and correct data before posting to SAP

The complete SAP application data management solution for Microsoft Windows users

- SAP Certified (ECC and S/4HANA)
- SAP Clean Core certified
- SAP ERP data upload, change, and download
- Installs on Microsoft Windows to use with Microsoft Excel or Google Sheets
- Native SAP Function Module
