Data Onboarding with Precisely EnterWorks and Automate Evolve

Achieve seamless and accurate data management from the start. With Precisely EnterWorks Master Data Management and Automate Evolve Process Automation, data is accurately ingested into the MDM and SAP and maintained throughout its lifecycle.

Precisely EnterWorks MDM and Automate Evolve enhance the business user experience by simplifying form-based workflows such as material and supplier onboarding, customer onboarding, and new product introduction. As users fill out forms, the data is immediately checked for accuracy and completeness. Our API applies SAP and MDM data quality/business rules to ensure the data meets quality standards at the source. Upon form submission, the data seamlessly flows to both the MDM solution and SAP as needed, without requiring additional development, thanks to native integration with SAP and other systems of record.

Precisely EnterWorks: Flexible, extensible multi-domain data hub in a single instance

- Provides golden record data for use across your organization.
- Data stewards centrally manage master data used across your organization.
- Manage, synchronize, and share trusted data across internal and external data sources, types, and services using flexible integration.
- Open, extensible integration framework designed with a "configure, not code" approach.

Precisely Automate Evolve: Enterprise-grade business process workflow and automation

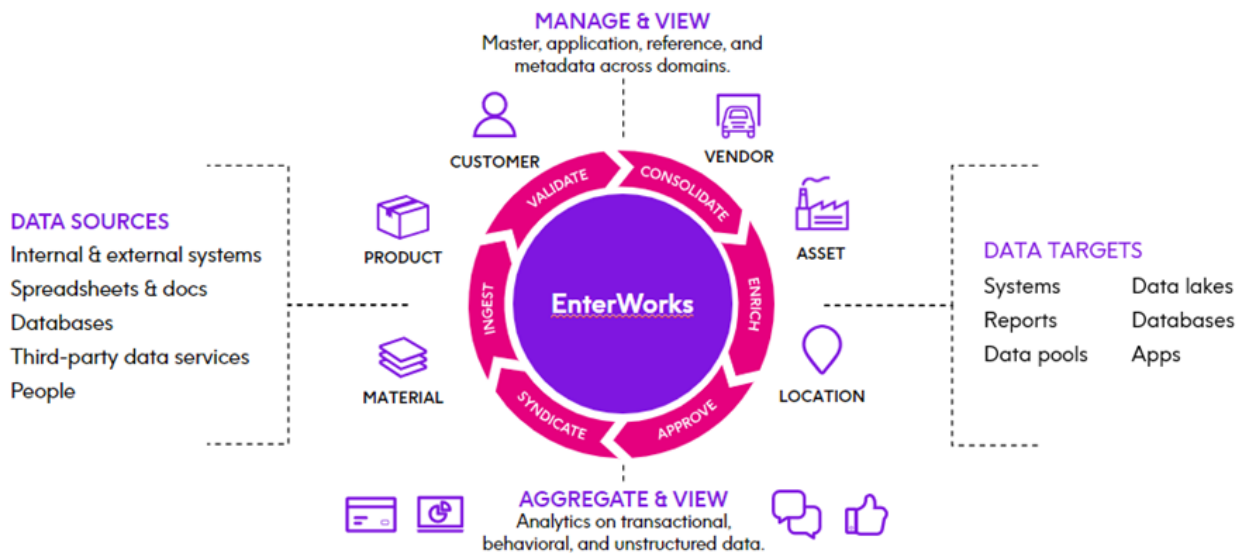

- Provides streamlined user-friendly solutions designed to simplify business process data collection and quality from one or more data sources.
- Route information to the right people at the right time with automated routing for business-process data workflows.
- Gain full visibility into current process status as well as historical process data used for analysis and reporting.
- Automatically transfer business process data into Precisely MDM and/or SAP using integrated solutions.

Benefits of our integration with SAP:

- **Integration approach**
 - Empower business users to independently build integrations with our SAP-certified solution, enabling them to post or extract data directly through the application layer without technical support
 - Enhance problem resolution and user experience by easily delivering specific, business-friendly messages.
- **User Security**
 - Ensure all interactions respect SAP security and permissions by allowing the choice between End User Account and System Account.
 - Leverage standard SAP user security control permissions, ensuring only authorized users can make changes, unlike generic APIs. Additionally, the SAP audit log captures individual SAP user identification from EnterWorks, rather than just labeling actions as "system".
- **Validations**
 - Ensure data is correctly and cleanly loaded into SAP the first time by adhering to SAP application layer rules, unlike generic APIs that bypass validations and create unnecessary risk.
 - Validate, create, or update entries made before writing to SAP.
 - Precisely EnterWorks users are notified within seconds of SAP validation errors (and reason).
- **Upgrades**
 - Maintenance free updates, typically requiring no changes during upgrades of both ECC and S/4 HANA systems.
 - Automatically adapt to field changes in SAP, eliminating the need for extensive testing and remapping that generic APIs require after upgrades to EDD and S/4 HANA.

The Precisely EnterWorks MDM advantage

Precisely EnterWorks, our multi-domain MDM solution, includes all the key capabilities that your organization needs to master your data and share it across all the systems that power your business. EnterWorks comes with everything needed to handle multiple data types, including master data, application data, reference data, and digital assets.

Native integration with SAP: Multiple native integrations with SAP and non-SAP systems. Includes APIs available for all functions.

Cross-Domain Intelligence: Enable advanced analytics and decision-making across your company's value chain by mastering a golden record for any domain, including buy side and sell side product, supplier, B2B and B2B customer, location, and physical or digital assets.

Innovation: Leading MDM technology is built on a cloud-native platform and includes an agile SOA/micro-services architecture; and the ability to enable future artificial intelligence (AI), augmented reality (AR), virtual reality (VR), and machine learning (ML) through the use of EnterWorks architecture with open APIs.

Empower End-Users: EnterWorks is designed to be configured, managed, and continuously updated by business users, accelerating business user adoption.

Fastest Time to Value: Organizations can implement EnterWorks MDM use cases in as little as 90-120 days, accelerating business value and return on investment. In fact, EnterWorks achieves the lowest total cost of ownership (TCO) among competing multi-domain MDM platforms.

B2B2C Enablement: Delivers necessary capabilities for end-to-end collaboration across the value chain, whether the other party is a producer, value-added provider, or end seller.
