ETL powered by Matillion

Streamline data modernization and AI readiness within the Precisely Data Integrity Suite

Overview

Precisely's ETL powered by Matillion combines Precisely's trusted expertise in data integrity and Matillion's modern cloud-native ETL platform to help organizations move, transform, and trust their data with speed and confidence. This offering is available through the Precisely Data Integrity Suite.

Together, Precisely and Matillion solve one of the biggest challenges in data-driven transformation: **getting trusted data to the right place in real-time.** This joint solution helps you speed up data modernization, improve AI readiness, and streamline data pipelines for hybrid and multi-cloud environments.

Solution Benefits

- Reduce complexity with end-to-end data management that streamlines movement, transformation, and data across the full lifecycle

- Improve AI and analytics outcomes by ensuring every dataset is accurate, consistent and contextual with governance, quality and enrichment

- Accelerate modernization initiatives by combining mainframe-to-cloud expertise with automated cloud-native integration across platforms already in your stack

- Scale data pipelines on demand with cloud-native, low-code pipeline design that reduces operational complexity and speeds time to value.

- Deliver higher-quality AI and analytics outcomes with trusted, optimized data that reduces bias and improves predictive accuracy.

Data Integrity Suite

50% faster data processing
Accelerates time-to-insight and innovation*

60% less time building data pipelines
Maximizes data team productivity and reduces cost**

70% less time maintaining and managing data pipelines
Enhances customer experience and operational officiency*

Precisely + Matillion bring you trusted data, smarter pipelines, and faster outcomes.

* Based on interviews with Precisely Customers

Precisely x Matillion Difference

This partnership combines Matillion's scalable, low-code pipeline automation with Precisely's strengths in governance and quality, integration, and enrichment, so data teams can accelerate modernization, operationalize AI and cut time-to-insight from months to minutes.

Within the Data Integrity Suite, you will have access to:

- Cloud native transformation with low-code automation
- End-to-end data lifecycle management, governance, and observability for audit-ready pipelines
- Trusted data that fuels modernization and AI initiatives
- Unified ETL pipelines that break down data silos without data loss

Build cloud-native ETL pipelines that are accessible to a wide range of user skills

Key Features

- Built for cloud
- Zero install
- Pushdown ELT
- Continual automatic updates
- Agent scaling
- Git integration built-in
- All passwords saved in Cloud Secrets

- Low Code UI
- Code optional
- Matillion exchange quickstarts
- Low-code pushdown Gen AI
- Gio™ AI Assistant
- AI-assisted expression generation
- Supports structured, semi-structured, and unstructured data types

- API connectivity via custom connector
- Pushdown Python
- Code re-use with shared pipelines
- Vector database access
- Text chunking
