

Automate Studio

Empower Business Users with industry-leading Google Sheets-based SAP® Automation

No matter whether you are using SAP ECC or have transitioned to SAP S/4HANA, Precisely's Automate Studio empowers your business teams to use Google Sheets to create and manage SAP data. With simple, business-friendly templates, users can perform mass data changes, post transactions, or validate records in minutes without having to learn or navigate complex SAP user interfaces.

Designed for scale, Studio delivers rapid productivity gains across departments like finance, supply chain, and master data. By automating business processes, Studio helps you become more efficient in SAP data creation and management while improving data integrity and accuracy.

Automate Studio for Google Sheets Screen Shot

Example Automate Studio Use Cases:

- Mass updates to SAP master data, including materials, vendors, customers, and G/L accounts
- Streamline journal entry uploads
- Transactional data processing (e.g., PO creation, goods receipts)
- SAP data transformation and cleansing for migrations and day-to-day business needs

Key Features:

- Eliminates complex SAP user interfaces for business users.
- Replaces SAP GUI interface with business-friendly spreadsheet interfaces.
- Works with BAPIs, IDocs, transactions, and custom T-codes
- Built-in data validation and error correction before uploading data to SAP
- Zero scripting, coding, or ABAP required

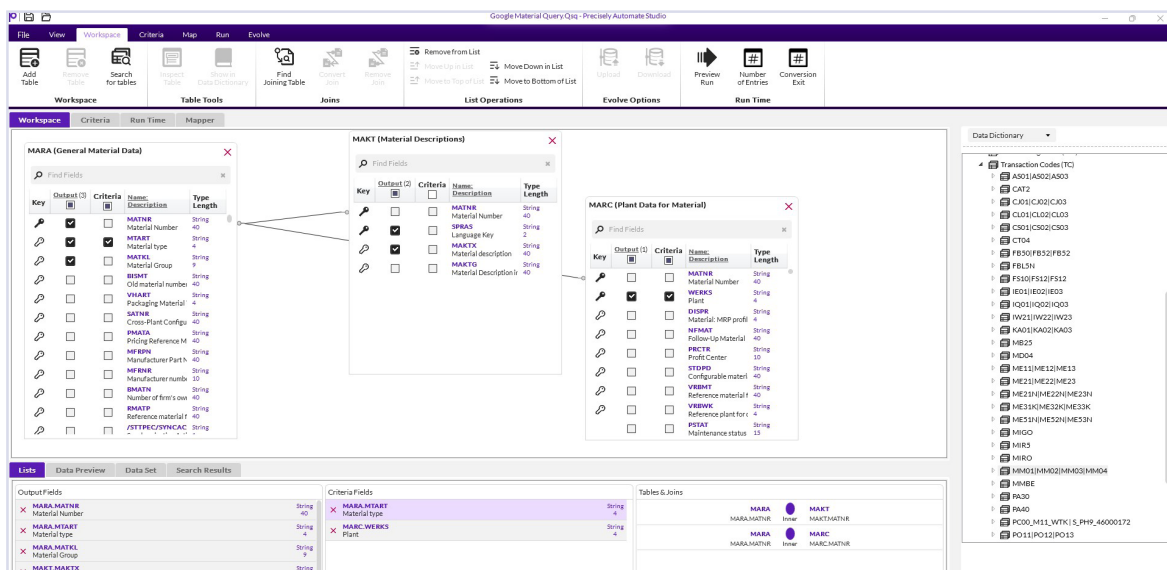

Easy-to-use spreadsheet-based interface

Automate Studio is an integrated tool for quickly deploying templates via Google Sheets to upload data to your SAP S/4HANA ERP system, bypassing the complexities of SAP user interfaces. You can streamline almost all SAP processes, from master data object creation to batch data management, including large-record changes and uploads, and complex master data creation tasks.

With the no-code Automate Studio development, you can create automation scripts without programming using our simple record-map-run process.

SAP data management at your fingertips

Automate Studio delivers a flexible solution environment that enables users to manage large volumes of SAP data quickly and easily. With Studio, you can Query SAP data into a Google Sheets document, make changes or updates to that data, validate those changes and then repost it without ever having to directly interface with SAP. This scenario, which we refer to as a “round trip” is perfect for things like pricing or condition changes, material extension and sales orders.

Use the Query module to extract data from SAP into a Google Sheets document

Key Features:

Automate Studio enables you to digitize complex SAP processes faster and build high-performance solutions with a range of rich SAP capabilities out of the box, so you can get to value fast.

- Eliminate manual data entry
- Upload SAP data in record time
- Improve data quality and integrity
- Minimize reliance on IT for Excel integration with SAP
- Get up and running fast with integrated SAP to Google Sheets integration
- Simplified, no-code user experience via record-map-run development
- Ensure compliance and security standards

Simplified Business User Experience

Run SAP processes easily and securely from Google Sheets.

- SAP data creation and change without interacting with SAP GUI
- Execute previously created upload templates from within Google Sheets
- Validate and correct data before posting to SAP

The complete SAP application data management solution for Microsoft Windows users

- SAP Certified (ECC and S/4HANA)
- SAP Clean Core certified
- SAP ERP data upload, change, and download
- Installs on Microsoft Windows to use with Microsoft Google Sheets
- Native SAP Function Module
