

Govern, Schedule, and Scale SAP Automation — From the Cloud

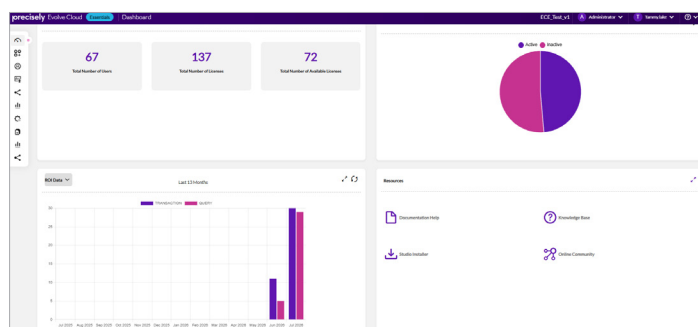

Evolve Cloud Essentials is Precisely's first pure SaaS administration platform for Automate Studio — giving SAP teams centralized governance, server-side execution, and usage-based flexibility in one no-code environment.

The Challenge

As Automate Studio adoption grows, so does the need for control. Who can run which scripts? When do jobs execute? What data is being posted to SAP, and by whom? Without a governance layer, automation scales risk alongside productivity.

The Solution

Evolve Cloud Essentials extends the power of Automate Studio with an enterprise-grade administration platform — now delivered as a fully managed SaaS service. IT administrators and SAP CoE teams get the visibility, control, and compliance tools they need. Business users get reliable, scheduled automation that runs without tying up a local PC.

Benefits

- Centralized Governance & Control**
 Manage user access, script approvals, and license allocation from a single dashboard. Enforce role-based permissions and data exchange policies with SAP across your entire organization.
- Server-Side Job Scheduling & Execution**
 Schedule automation jobs to run directly from the server — not a user's desktop. Extract data from SAP, post data from Excel or Google Sheets, and manage mass data operations on your schedule.
- Audit & Compliance Readiness**
 Maintain a complete, immutable record of every execution, approval, and data exchange. Satisfy internal audit requirements and regulatory obligations with no additional tooling.
- ROI & Performance Reporting**
 Built-in dashboards surface time and cost savings, records processed, active users, process status, and error rates — giving leadership clear visibility into the value of automation.
- Content & Configuration Management**
 Store automation scripts centrally with optional approval workflows before content reaches SAP. Reduce the risk of unauthorized or erroneous transactions across your SAP landscape.
- SAP Data API**
 Connect and exchange data with SAP programmatically, enabling integration with external systems and extending automation beyond the desktop — without requiring custom ABAP development or IT-managed middleware.

“Its ease of use means we can create and update scripts without involving IT, reducing the strain on IT resources.”

— Grégory Russo, SAP Solution Manager, L'Occitane

Capability	Description
Role-Based Access Control	Define permissions at user, team, and script level
Script Approval Workflows	Two-step review and approval process before deployment
Server-Side Job Scheduling	Schedule any Automate Studio job to run at a specified time
Centralized License Management	Allocate, reallocate, and track all Studio licenses
Audit Logs	Complete records of executions, approvals, and SAP data exchanges
Usage & KPI Reporting	Dashboards for adoption, throughput, and automation ROI
Google Sheets Integration	Run scheduled data jobs directly from Google Sheets
SAP Data API	Connect and exchange data with SAP programmatically for integration with external systems
No-Code Administration	No ABAP, scripting, or developer resources required
SaaS Delivery	Hosted, maintained, and updated by Precisely — no infrastructure to manage

Use Cases

Enterprise SAP CoE Management Govern Studio licenses and scripts across multiple business units, regions, or environments from a single administration console.

Scheduled Mass Data Operations Run high-volume SAP data loads, updates, and extractions on a schedule — freeing users from manual execution and eliminating desktop dependency.

Compliance-Driven Environments Maintain full audit trails and approval workflows for organizations with strict regulatory or internal audit requirements.

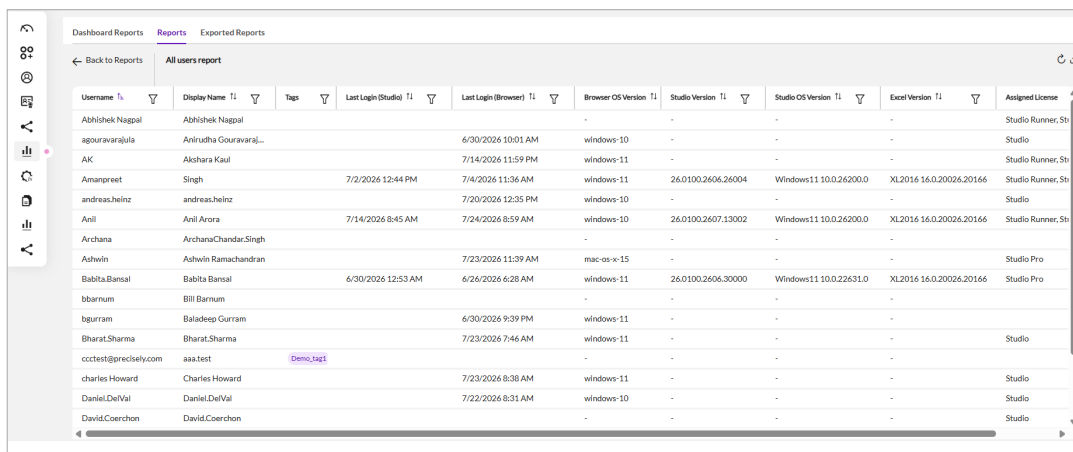

Scaling Citizen Automation Support broad rollout of Automate Studio to business users while maintaining IT oversight and governance at every step.

Who It's For

- SAP Centers of Excellence (CoE)
- IT and SAP administrators
- Business process owners managing recurring data operations
- Organizations expanding Studio adoption across departments
