Precisely AI Studio Addendum
to the Evaluation Agreement
(Version 2.1: 10-Oct-2026)

A.1 Scope and precedence. This Addendum applies to an Evaluation of Precisely AI Studio and forms part of the Agreement for that Evaluation. Precisely designates Evaluations of Precisely AI Studio as subject to this Addendum for the purposes of the order of precedence set out in the Evaluation Agreement. In the event of any conflict between this Addendum and the Evaluation Agreement, any other Addendum or the EULA, this Addendum prevails with respect to Evaluations of Precisely AI Studio. Capitalized terms not defined here have the meanings given in the Evaluation Agreement.

A.2 Registration. Registration requires a business email address. Precisely will record the registering User's first and last name, business name, business email address and selected region, and any subsequent enablement by Customer of an AI System within the Licensed Products. Those records are evidence of any such enablement, and Section 2.1 of the Evaluation Agreement applies to the record of acceptance.

A.3 Evaluation Period. The Evaluation Period is 30 days.

A.4 AI functionality. During the Evaluation, AI functionality within the Licensed Products may use a third-party large language model connection made available by Precisely, and Precisely may separately provide applications, agents, skills, prompts, execution manifests and orchestration components that use that model connection. Where Customer has a large language model connection configured in its existing Precisely Platform environment before commencement of the Evaluation, the Licensed Products may use that connection during the Evaluation. Except for such pre-existing connection, Customer may not substitute or reroute a model connection or integrate another AI system into the Licensed Products during the Evaluation. This does not limit Customer's use of a connector, endpoint or interface made available by Precisely to access Precisely data services from its own AI client, as addressed in Section A.7.

A.5 Permitted use and data. Customer shall use the Licensed Products solely for non-production evaluation of their documented functionality. Where an Evaluation asset relates to customer, contact, claimant, device or location data, Customer shall use only Precisely-provided sample data or data that is not Personal Data, and public descriptions of an asset do not expand those categories. Customer shall not use the Licensed Products, or any AI System enabled within them, for any high-risk or prohibited purpose as described in the AI Terms. Without limiting Section 3 of the AI Terms, Customer shall not use any Evaluation asset, in relation to a natural person, to assess or price life or health insurance risk; determine eligibility for credit, insurance, employment, education, benefits or essential services; or assess whether that person has committed or is likely to commit a criminal offence. Customer shall not modify, customize, rebrand or change the intended purpose of any AI System made available in the Evaluation, or use any output generated during the Evaluation to determine, or materially support the determination of, a transaction, claim, policy, service or decision concerning a natural person.

A.6 Outputs. Where the Licensed Products identify Outputs generated through a model connection as AI-generated or apply a machine-readable marking to them, Customer shall not remove, obscure or defeat any such identifier or marking. Customer remains responsible for any additional disclosure obligations arising from its downstream publication or use of the output. The presence of an identifier or marking is not a representation that the output is suitable for any regulated or high-risk use.

A.7 Customer's own AI environment. Where Customer uses a connector, endpoint or interface made available by Precisely to connect a Customer-controlled AI client, model or environment to Precisely data services, Customer controls the selection, configuration, intended purpose and use of that system and, as between the parties, is responsible for obligations arising from those matters. Precisely's contractual responsibility is limited to providing the connector, endpoint or interface in accordance with the applicable Documentation. An AI client, model or environment is "Customer-controlled" only where Customer independently selects and controls it. A component provided by Precisely does not become Customer-controlled solely because it is invoked through such a connector, endpoint or interface or installed in a Customer-selected AI client.
