

# The easy way to build data solutions fast.

Ready-made agents, apps, and skills you can explore, try, and run in the AI tools you already use.

# precisely AI studio

## The hardest part is starting

Building a compelling AI demo is easy. The data behind it is small, clean, and handpicked. Building AI you can trust at scale is much harder, because real data is none of those things, and AI doesn't question what it's given. It acts on it. That is why starting is so hard. Facing a blank page, many builders spend more time figuring out where to begin than actually building, and often find out the data isn't ready only after they've begun.

## Start with proven AI assets

Precisely AI Studio gives you a better place to start: a growing collection of agents, apps, and skills that help you make data AI-ready and build on it. AI-ready data is visible, reliable, accountable, and complete.

These assets are organized by industry and outcome, so you can find a solution that fits your problem. They work with Claude, Microsoft Copilot, and ChatGPT, and you can try them for free.

## How AI Studio gets you building

- **Start in minutes:** Every asset is ready-made, tested, and pre-connected through MCP. The groundwork is already laid.
- **Grounded in trust:** Assets run on Precisely capabilities and datasets, so your project starts with data and tools you can rely on.
- **No stack lock-in:** Use any AI model or tool you choose. Precisely stays neutral across your data estate.
- **See how it's built:** Every asset has an architecture view, so you can see how it works and what it connects to.

## Three steps to a working solution

1. **Find a starting point.** Browse the collection of assets by industry or outcome.
2. **Try it in AI Studio.** Use assets with Precisely sample data and prompts, then see how each one behaves. An app may deliver the full outcome you need, or spark an idea for what to build.
3. **Run it on your stack.** Download the agents and skills you want and run them in your own environment with a Precisely MCP connection.

## Assets for every step of the build

### Agents

Task-focused agents you can download and point at your own records. Each comes with sample prompts to try.

### Apps

Pre-built applications that deliver a full industry outcome, ready to use in AI Studio.

### Skills

Building blocks you can download and drop into your own stack, with a test prompt to confirm it's set up.

## Get started today

**Start a free trial** and run your first asset in minutes.

**Join the AI Studio Community** to connect with other builders.
