

Automate MCP Server

Connect any AI to your SAP automation through natural language.

Your AI assistants can hold a conversation, but LLMs often can't reach the SAP systems where your real business work happens.

The **Precisely Automate MCP Server** closes that gap. Using the open **Model Context Protocol (MCP)** standard, it exposes your existing Automate Studio scripts and Evolve workflows as AI-callable tools, so any MCP-compatible AI assistant can invoke, manage, and monitor complex SAP processes through natural language.

1 Speak

Give your compatible AI assistant a natural language instruction, like "Update inventory for SKU 4821."

2 Connect

The MCP Server routes the request to the right Automate Studio script or Evolve workflow.

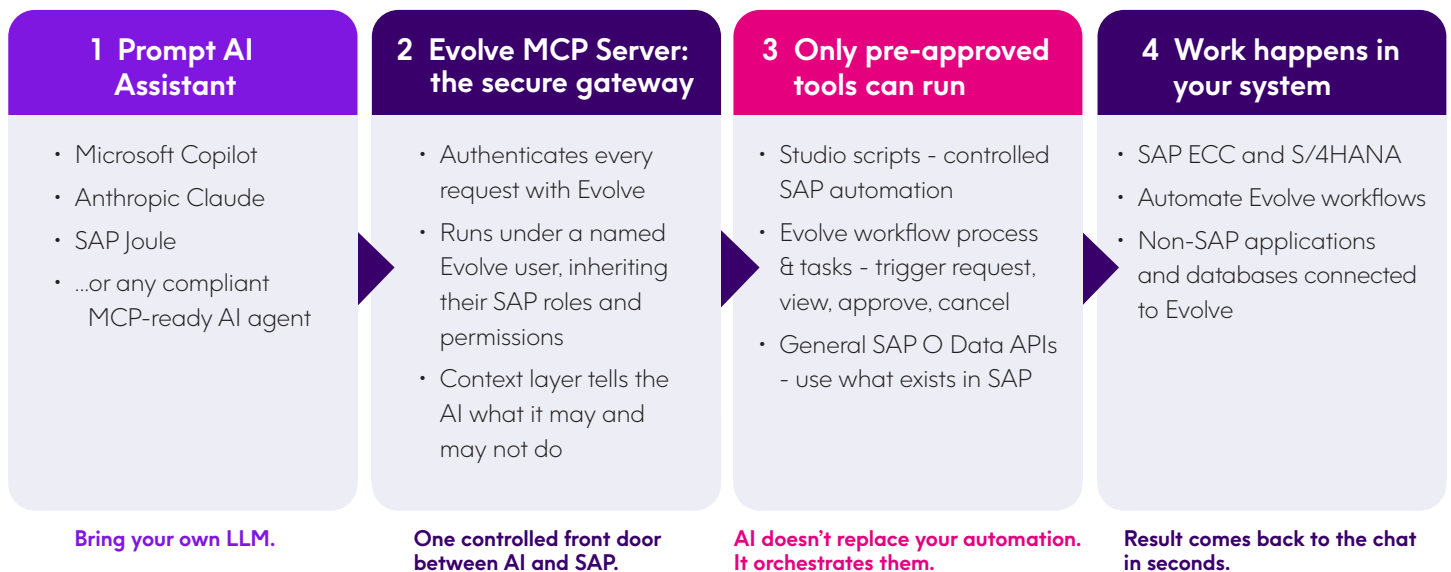

3 Execute

Automate Studio or Evolve handles the SAP interactions. Your AI assistant confirms completion in plain language.

How the Evolve MCP Server works

Your team asks in plain language - Evolve turns it into approved, governed action in SAP.

Secure, governed, and fully traceable

Every call is logged

MCP Trace records the user, client, input, output, and timestamp of each request.

You can see the cost

An AI Usage Report shows taken consumption for every call.

No way around the rules

Tools never override a user's Evolve or SAP authorizations.

Key Capabilities

Connectivity & Compliance

- ✓ **Compatible AI, one SAP connection.** Configure once to use with Claude, Microsoft Copilot, ChatGPT, or other MCP-compatible clients.
- ✓ **Natural language SAP automation.** Instruct your AI assistant in plain language; Studio and Evolve handle the SAP logic invisibly.
- ✓ **Access existing automation scripts.** Use the MCP server to access existing Automate scripts without modification or redevelopment.

Productivity & Value

- ✓ **No integration rebuild per LLM.** Stop writing one-off integrations. MCP is an open standard, so compatible AI tools just work.
- ✓ **Existing automation, new reach.** Your current Studio scripts and Evolve workflows quickly become AI-callable, without rework.
- ✓ **Enterprise-grade security.** Authentication and access controls are managed through Automate, keeping SAP credentials off the AI layer.

Who Benefits

AI & automation architects

Standardize AI-to-SAP connections on MCP through Automate Evolve. One integration works for every compatible AI tool.

Digital transformation & AI strategy leaders

Turn AI strategy into SAP workflow automation while protecting existing Automate investments.

Business process owners

Empower teams to trigger and monitor SAP workflows through AI assistants they already use. No new tools, training, or IT ticket.

Precisely Automate MCP Server is the enterprise bridge between AI and SAP automation, enabling any MCP-compatible client to orchestrate complex, data-intensive SAP processes through natural language, using the open Model Context Protocol standard, without custom integration development for each AI platform.
